

Content Innovation Cloud

Unlock the Power of Your Content

The Content Innovation Cloud is a powerful platform designed to unify content across the enterprise, automate processes independent of your repositories, and deliver curated agentic AI insights across your organization. Whether you're modernizing legacy solutions or scaling innovation, CIC helps you unlock the full value of your unstructured data and document—securely, intelligently, and without disruption.

80–90%
of enterprise data
is unstructured

Spread across an
average of
21
repositories

Grows **3x**
faster than
structured data

The Challenge

Every organization wants to become more data-driven, automated, and intelligent – but critical insights often remain trapped in fragmented systems, unstructured data, and inconsistent governance.

Traditional content management systems fall short, requiring difficult integrations, painstakingly structured data, and time-consuming searches for information.

The Solution

The Content Innovation Cloud (CIC) unifies content, processes, and applications into one intelligent ecosystem – without disrupting current infrastructure.

CIC transforms siloed content into AI-ready, actionable intelligence, unlocking automation, efficiency, and innovation.

Built on a Solid Foundation

Cloud Update Service:

Automates updates to ensure security and compliance while freeing resources for insights, not IT maintenance.

Content Federation Service:

Connects existing repositories without migrating content, enabling secure access and system-wide intelligence.

Three Pillars of Innovation

Content Intelligence

Turns unstructured data into structured, AI-ready content.

- **Knowledge Enrichment:** Creates high-quality, automation-ready data and reveals document relationships.
- **Knowledge Discovery:** Uses natural language search across systems, streamlining insights.
- **Agent Builder:** Deploys AI agents to automate complex, content-driven tasks.

Process Intelligence

Optimizes workflows and powers enterprise-wide automation.

- **Hyland Automate:** AI-powered orchestration of business processes.
- **CloudOCR Integration:** Easily use CloudOCR to feed data into Hyland Automate or RPA.
- **Hyland RPA:** Automates repetitive, rule-based tasks for higher productivity.

Application Intelligence

Brings insights into the systems where work already happens.

- Access and act on documents within tools like Workday or Salesforce
- Embedded intelligence enhances decision-making without switching platforms
- Prebuilt connectors extend smart capabilities across your tech stack

What You Can Accomplish

- Activate AI, intelligent agents, and automation – no heavy setup
- Unify disconnected systems to improve governance and access
- Unlock content value for real-time insights and better decisions
- Modernize without replacing infrastructure
- Simplify updates and innovation – reduce IT burden and focus on strategy

Keep Your Data Where It Is

REQUORDIT supports your current and future content strategies – whether on-prem or in the cloud. CIC integrates with existing platforms, allowing you to adopt advanced features without disruption. As your needs grow, CIC evolves with you.
